

Effects of a mixed-mode design in the German Mobility Panel

Christine Weiss, Bastian Chlond
2nd Netherlands Mobility Panel, 12 September 2016

INSTITUTE FOR TRANSPORT STUDIES, KARLSRUHE INSTITUTE OF TECHNOLOGY (KIT)

Motivation and research question

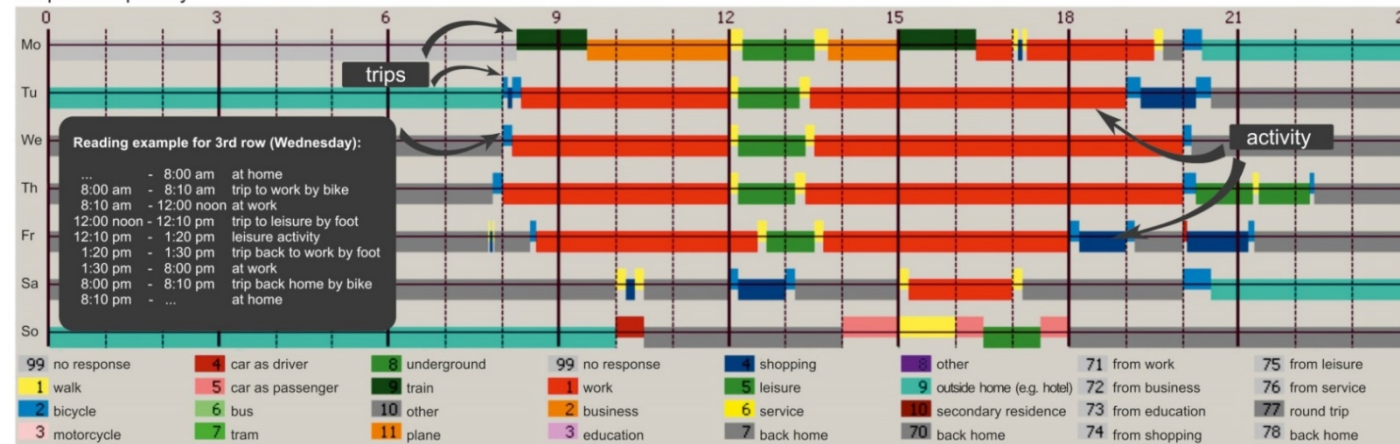

The German Mobility Panel (MOP)

- Annual survey on travel demand in German households since 1994
- 1,000 -1,500 households; persons aged 10 years and older
- Trip diary for a whole week (multiday) in autumn

Trips

Graphical trip-diary

- Households report for three consecutive years (rotating panel)
- Funded by the German Federal Ministry of Transport and Digital Infrastructure (TNS Infratest: field work; KIT: design & scientific supervision)

Motivation and research question

Survey design adaptations

- **Important:** time series data on travel behaviour
- **But:** declining participation rates amongst particularly young adults

94

12

13

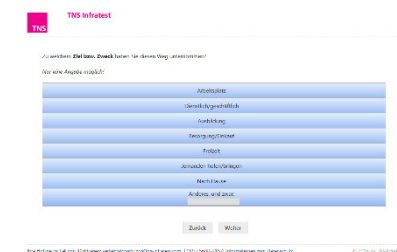

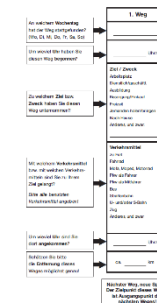

14

15

Recruitment: landline & mobile phone

Data collection: PAPI & CAWI

- Does the mixed-mode design affect survey results? If so, why?
 - **Selection effect (SE):** different population groups participate
 - **Measurement effects (ME):** trip diary is filled in differently solely because of the survey mode

The online survey

- Accessible via IP address or QR code
- No App but optimized for mobile devices
 - One question per screen
 - Trip diary completion might require more time
- The same questions and response options than in PAPI

TNS Infratest

Um wieviel **Uhr** haben Sie diesen Weg **begonnen**?

Sample of investigation

The German Mobility Panel (MOP)

- First year reporters of the surveys 2013, 2014 and 2015 (N: 3,566 Persons)
- Unweighted analyses
- Distribution of the sample to the survey modes:

Descriptive results

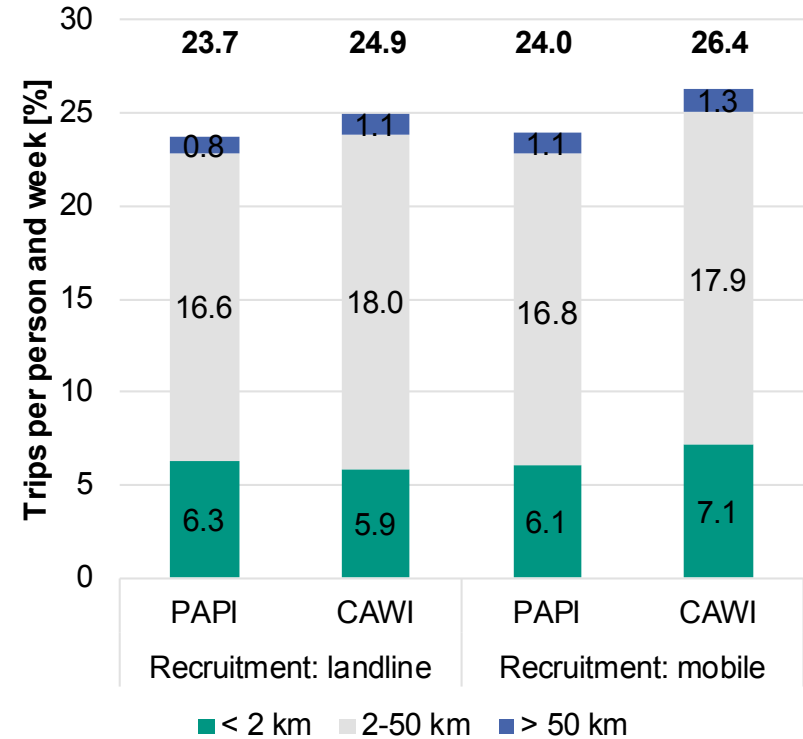

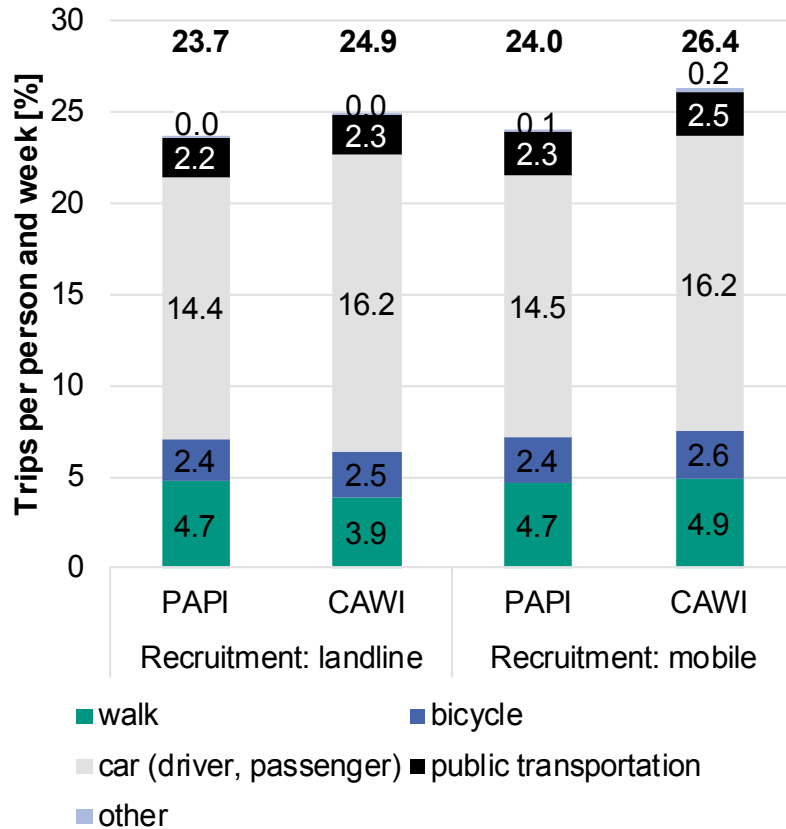

Travel behaviour

Quantities per week	Recruitment: landline		Recruitment: mobile	
	PAPI diary	CAWI diary	PAPI diary	CAWI diary
Trips made [#]	23.7	24.9	24.0	26.4
Distance travelled [km]	281.8	368.0	332.1	398.5
Time spent in the transportation system [min]	581.3	598.7	617.4	654.6
Days with any trip-making	6.4	6.3	6.5	6.6

Descriptive results

Trips made within the survey week

Travel behaviour differs between the four survey mode groups...

Descriptive results

Sociodemographics

■ ...and the sociodemographics differ as well!

Trips made per week [#]	■	1.26	-0.01	23.68	24.93	■	1.54	0.86	23.95	26.35

- Most TEs of overall travel quantities are explained by SEs
- Distance travelled: overestimation of distances because CAWI diaries are not filled in regularly?

Propensity score weighting

Survey mode effects

Recruitment: landline

Recruitment: mobile

- Underreporting of walking and cycling trips and short trips
- Small MEs only for trips longer than 2 km
- Disparities due to MEs occur more often amongst landline recruits

Trips made per week grouped by modes of transportation [#]

Walk		-0.11	-0.72	4.73	3.90		0.32	-0.07	4.69	4.94
Bicycle		0.01	0.11	2.37	2.49		0.17	-0.06	2.45	2.56
Car (driver / passenger)		1.36	0.51	14.38	16.25		0.82	0.89	14.45	16.16
Public transportation		-0.01	0.11	2.15	2.25		0.21	-0.02	2.30	2.49

Trips made per week grouped by trip distance [#]

< 2 km		0.20	-0.62	6.29	5.87		0.41	0.64	6.08	7.13
2-50 km		0.86	0.54	16.57	17.98		0.92	0.22	16.75	17.88
>50 km		0.19	0.08	0.82	1.09		0.22	-0.01	1.12	1.33

- Propensity score weighing is suitable to analyse the effects of a mixed-mode design in the MOP to the survey results
- Our findings can be utilized to adapt focal modes (i. e. CAWI) of a survey further, e. g.
 - App for CAWI with automatic regular reminders to fill in the diary.
 - Frequently visited places /activities
- Broad discussion in social science literature: which methods are most suitable to analyse mixed-mode surveys? (others: propensity score matching, double robust regressions, multiple imputation)
- Socio-demographic information only are not sufficient to estimate the probability of a participant to choose a survey mode. Better questions, e.g. the availability of smartphones and tablets, usage of mobility apps
- Survey mode effects need to be taken into consideration when comparing travel survey outcomes, since they influence the outcome

Thank you!
